

# THE MAY LYME PROJECT

Exposing Australia's Hidden Epidemic

Lyme disease is an infection most commonly transmitted via a tick bite. Patients have been diagnosed in every state of Australia.

Australian patients are raising awareness and campaigning for:

- Recognition of tick-borne and Lyme-like illnesses
- Professional support for GPs and Health Professionals treating patients for Lyme-like illness
- The accurate diagnosis and effective treatment of Lyme and other tick-borne infections
- Epidemiological study and coordinated surveillance of Lyme-like illness
- Funding for research into transmission, testing and treatment of tick-borne diseases

Lyme disease is affecting someone you know.  
Please join us to Take Action Now for Lyme patients!

Check the website for your state details.
